PROFESSIONAL SUMMARY

Microsoft Azure certified dynamic and results-oriented Data professional with a robust foundation in data analytics and machine learning, complemented by extensive experience in the Retail, Finance, FMCG and Health domain backed by a MSc in Data Science. As a Senior Analyst at Innovation Technology by Design, I earned the Q4 Superstar Award for spearheading data-driven solutions that significantly enhanced client sales performance and optimised resource allocation, achieving a 15% boost in operational efficiency. Proficient in Python, SQL, R, Excel, and statistical modelling, adept at deriving actionable insights to drive measurable business outcomes. Currently deepening technical expertise through certifications in Azure Cloud Data Platforms, with a focus on contributing innovative and scalable solutions to the data industry.

SKILLS

- Technical Skills:**
Programming Languages: Python, R, SQL, Shell Scripting
Big Data & Cloud Technologies: Apache (Hadoop, Spark), Azure Data Factory, Databricks, MLlib, Azure Machine Learning
Database Management: Relational Databases, NoSQL, Database Migrations, Database Replication.
- Tools and Frameworks:** Alteryx, Power BI, Tableau, Jupyter Notebooks, Pandas, Matplotlib, Microsoft Excel.
- Competencies:** Data Cleaning and Analytics, ETL Pipeline Maintenance, ELT, Exploratory Data Analysis, Statistical Analysis, Data Visualisation.

PROFESSIONAL EXPERIENCE

Claims Handler
Direct Line Group

Liverpool, U.K.
Mar 2025-Present

- Analysed, validated, and cross-checked claim data, customer documentation, and policy information across multiple internal systems to support **accurate, timely, and compliant business decisions**, ensuring fair outcomes for customers while adhering to regulatory and organisational standards in a highly customer-centric environment.
- Interpreted and evaluated **structured data** (policy records, claim histories, financial values) and **unstructured data** (customer statements, incident descriptions, supporting evidence) to identify data inconsistencies, exceptions, and potential risk indicators, maintaining **high standards of data quality, accuracy, and traceability** throughout the claims lifecycle.
- Collaborated closely with **underwriting, fraud, compliance, and customer service teams** to resolve complex and escalated claims, contributing to cross-functional discussions, aligning on data interpretation, and ensuring decisions balanced customer experience, risk management, and regulatory requirements.
- Conducted **ad-hoc investigations and analysis** in response to claim escalations, exceptions, and urgent business queries, rapidly assessing available data, identifying root causes, and supporting timely resolution while consistently meeting **strict service-level agreements (SLAs)**.

Strategic Analyst (Remote)
Smart Analytics Solutions

Gurugram, India.
Oct 2024-Mar 2025

- Collaborated with a leading retail client to perform an in-depth analysis of shopping behaviours and purchasing patterns. Utilised **SQL** for data querying and manipulation, combined with **Pandas** and **Matplotlib** for exploratory and statistical analysis. The actionable insights derived from the data led to optimised promotional strategies, including targeted discounts and personalised campaigns, which significantly improved customer engagement and sales conversion rates.
- Built executive-level reports by integrating multi-source customer data—including transactional records, web session metrics, and loyalty program data—using **ETL processes** and real-time **API** feeds. Leveraged clustering techniques (e.g., **k-means**) and **regression analysis** to segment customers and **forecast** conversion probabilities, enabling leadership to identify key behavioural patterns and drive an 8% increase in conversion rates.
- Designed and implemented scalable **ETL** pipelines using **Databricks** and **Azure Data Factory**, integrating structured and unstructured data from diverse sources. The optimised pipelines reduced data processing time by 30% and facilitated real-time insights through **predictive analytics** and dynamic dashboards, leveraging **Power BI** for visualisation.
- Developed automated data workflows using **Alteryx** to streamline data processing and enhance efficiency in data preparation, significantly reducing manual intervention and improving data accuracy for reporting and **predictive**

modelling.

- Developed **Tableau dashboards** to unify retail metrics, such as customer buying patterns and churn data, into visually intuitive representations. These dashboards simplified complex datasets, empowering non-technical stakeholders and executives to make timely and strategic decisions.

Intern Data Scientist

Royal College of Nursing (NHS)

Manchester, U.K.

Jun 2024- Sept 2024

- Developed a robust cost-of-living predictive model by analysing over 500,000 member records. Utilised **Python** libraries such as **Pandas**, **NumPy**, and **scikit-learn** for feature engineering and model development, and employed **matplotlib** and **seaborn** for detailed trend analysis. Identified regional disparities and forecasted inflationary trends, enabling equitable allocation of resources and enhanced member communication.
- Leveraged **Azure Data Factory** to automate the integration of external **APIs**, including Office for National Statistics (ONS) and NOMIS datasets. Streamlined data ingestion, reducing manual intervention by 30%. Ensured real-time updates to support timely benefit distribution and decision-making.
- Automated **Python scripting** for data processing and report generation, improving efficiency and reducing processing time by over 35%. Developed reusable scripts for transforming unstructured data into structured formats, enabling faster delivery of insights and enhancing stakeholder reporting.
- Worked closely with stakeholders to define project requirements and objectives. Delivered presentations to senior leadership, informing policy decisions and fostering data-driven organisational strategies.

Senior Analyst

Innovation Technology by Design

Chandigarh, India.

Apr 2019- Jun 2023

- Delivered bespoke analytics solutions for clients across Retail, Finance, Health, and FMCG sectors. Applied machine learning models, including **time-series analysis** and **regression models**, to tackle challenges like demand forecasting and customer behaviour prediction. Improved inventory planning and customer retention through precise forecasting.
- Conducted in-depth sales analysis across multi-regional datasets using **SQL** and **Python**. Uncovered underperforming regions and optimised marketing efforts, increasing regional sales by 15%.
- Applied **Natural Language Processing (NLP)** using libraries such as **NLTK** and **spaCy** to perform sentiment analysis on customer feedback. Revealed key pain points, informing product improvements and enhancing customer satisfaction metrics.
- Automated complex **ETL (Extract, Transform, Load)** workflows for ERP data integration using **Python** and **SQL Server Integration Services (SSIS)**. Reduced analysis time by 25%, enabling real-time operational reporting and agile decision-making.
- Designed and implemented interactive dashboards using **Power BI** and **Tableau** to transform complex datasets into intuitive visual narratives. By integrating real-time data streams and employing advanced visualisation techniques, these dashboards provided senior leadership with actionable insights, enhancing decision-making efficiency. They facilitated scenario analysis, tracked KPIs, and supported strategic initiatives across multiple departments.

EDUCATION

UNIVERSITY OF SALFORD

Master of Science in Data Science, *Grade: Merit*

Core Modules: Machine Learning & Data Mining, Advanced Databases, Applied Statistics & Data Visualisation, Big Data Technologies.

Manchester, U.K.

Sep 2023-Sep 2024

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals (AZ 900)
- Power BI by A-Leap
- Coursera: Machine Learning by Andrew Ng
- Azure Data Engineer Associate

Jan 2025

Oct 2024

Dec 2022

In Progress
